## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1, 2 and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Chauvel et al.

Claim 1 and 4: A moving picture experts group (MPEG) decoder for producing a caption for

display on a screen, said decoder producing a video stream from an externally-applied MPEG stream, the decoder comprising:

a video decoder for decoding the video stream and extracting user data from header information of the video stream; See figure 1b item 252

a header memory for storing the user data; (See Chauvel figures 17B,D,E and F where header data is clearly extracted, storage of the header is inherent.)

a central processing unit (CPU) for producing caption data by decoding the user data and transforming the caption data into on-screen-display (OSD) object data; (See figure 2 item 220, the Arm core is a CPU capable of performing this function.

Art Unit: 2613

an OSD controller for transforming the OSD object data into pixel data in response to a predetermined enable signal and outputting the pixel data; and a video mixer for mixing the pixel data with the decoded video data. (See column 41 lines 30-59, please note the mixing function on line 39. In addition an enable signal is inherent, the OSD processor is controlled by the CPU therefore an enable signal is required.)

Claim 2. The MPEG decoder of claim 1, wherein the OSD controller comprises:

an OSD buffer for storing the OSD object data received from the CPU; and  
an OSD processor for reading the OSD object data from the OSD buffer and transforming the OSD object data into pixel data. See column 43 lines 33-67. Buffer and memory are synonymous.

***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. The term "displaying ordinary OSD characters when an ordinary function is performed" in claim 3 is a relative term which renders the claim indefinite. The term "ordinary function" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention
